How David Got Started with Kaz

David set it up. David stays in charge.

KAZ does the legwork DAVID makes the decisions

1 **Gets the app** — DAVID

David downloaded the free Muse app from Meta and installed it on his Mac and his iPhone.

2 **Names his helper** — DAVID

David named his assistant Kaz, after the last of his greyhounds, and chose its friendly style.

3 **Connects what he chooses** — DAVID

David let Kaz see his email and contacts — only what David allows, nothing more.

4 **Lays down the law** — DAVID

David set the rules: check facts, ask before acting, and never send anything in David's name.

5 **Builds the first job together** — DAVID + KAZ

David and Kaz designed the weekly Data Center News. It has run every Tuesday since October 13.

Kaz only knows what David shares.

Kaz is a computer helper David uses. David is always in charge.
